

## matplotlib.pyplot Cheat Sheet

by gabriellerab via cheatography.com/61175/cs/16431/

## Importing the library

import matplotlib.pyplot as plt

| Plots and key arguments |            |   |  |  |
|-------------------------|------------|---|--|--|
| Line                    | plt.plot() | (x_data, y_data)                        |  |  |
| graph                   |            |   |  |  |
| Scatter                 | plt.sc-    | (x_data, y_data)                        |  |  |
| plot                    | atter()    |   |  |  |
| Bar chart               | plt.bar()  | (x_locs, bar_he-<br>ights, width = int) |  |  |
| Histogram               | plt.hist() | (data, bins = int)                      |  |  |
| Pie chart               | plt.pie()  | (data, labels = list)                   |  |  |

| Optional arguments     |   |  |
|------------------------|---|--|
| color ="co-            | Change plot color   |  |
| marker = "-<br>symbol" | Change marker for line or scatter plot (".", "x", " ", "o") |  |
| markersize<br>= int    | Change marker size  |  |
| linewidth =<br>int     | Change line width for line graph                            |  |
| cmap =                 | Color plot according to a                                   |  |

colormap

| Key functions                |                                      |
|------------------------------|--------------------------------------|
| plt.clf()                    | Clear figure                         |
| plt.savefig("fil-<br>ename") | Save figure (call before plt.show()) |
| plt.show()                   | Show figure                          |
|                              |                                      |
| Axis functions               |                                      |
| plt.xlim(xmin,               | Set the limits for the x             |
| xmax)                        | axis                                 |
| plt.ylim(ymin,               | Set the limits for the y             |
| ymax)                        | axis                                 |
| plt.xscale("scale            | Set scale for the x axis             |
| type")                       | (ex. "log")                          |
| plt.yscale("scale            | Set scale for the y axis             |
| type")                       | (ex. "log")                          |
| plt.twinx()                  | Add a second y axis                  |
| plt.axis("off")              | Do not show the axes                 |
| plt.gca().invert_            | Invert the x axis                    |
| xaxis()                      |                                      |
| plt.gca().invert_            | Invert the y axis                    |

| Labeling functions                   |                              |
|--------------------------------------|------------------------------|
| plt.title("title")                   | Add a title                  |
| plt.xlabel("x axis label")           | Add a label to the x axis    |
| plt.ylabel("y axis<br>label")        | Add a label to the y axis    |
| plt.legend(loc = int)                | Add a legend                 |
| plt.xticks(range(min, max, interval) | Modify the x axis tick marks |

## Multiple plots plt.plot(x\_data1, y\_data1) plt.pl ot( x\_d ata2, y\_data2) plt.pl ot( x\_d ata3, y\_data3) plt.show() You can put multiple plots in one figure

You can put multiple plots in one figure by defining each one before plt.show() or plt.savefig()

## Using colormaps

cmap=cm)

# Choose a colormap and assign
to a variable
cm = plt.cm.ge t\_c map ("Rd YlB u")
# Set the color map in a plot
plt.sc att er( x\_data, y\_data,

See all colormaps here: https://matplotlib.org/users/colormaps.html

colormap
